

Elevate your digital transformation

To elevate everything from your patient experience to your business operations, discover the benefits of AeronaDental – a leading cloud-based practice management software. AeronaDental provides cost and time savings, data security, regular upgrades, essential business analytics and real-time business performance indicators. It also supports an excellent patient experience, because the team can focus on their patients with intuitive technology at their side.

AeronaDental also offers unrivalled customer service. This covers everything from software setup and customisation to on-going advice that enables you to truly maximise on the many software features available.

To elevate your business management and growth, while also promoting exceptional dentistry, contact AeronaDental today... and join them on the cloud! For more information, visit <https://aerona.com/>.

Home-use oral health-enhancing device

Everyone suffers from occasional halitosis. Understanding the root cause is important for addressing and preventing the problem. Lumoral, developed by Finland's Koite Health Ltd, is a home-use oral health-enhancing device that is used in addition to regular tooth brushing. It treats and prevents serious gum infections while also helping combat harmful oral bacteria – a common cause of bad breath.

Halitosis is primarily caused by specific bacteria in the mouth, such as *streptococci*, which are also found in various infections in the body. Oral bacteria, especially those related to gum disease and periodontitis, can produce foul-smelling volatile sulphur compounds (VSCs) in the mouth and may also be a sign of gum inflammation.

Lumoral is an antibacterial and light-activated oral care method developed by Finnish researchers that is designed to be used in addition to regular tooth brushing. Supported by strong scientific evidence and the recommendations of a growing group of oral health professionals, Lumoral is attracting widespread international interest.

Lumoral treatment is suitable for everyone but is especially useful for individuals facing oral health challenges. The Lumoral method also freshens breath. Its antimicrobial effect targets bacteria on dental surfaces that cause inflammation but does not affect other oral mucosal bacteria.

Antibacterial Lumoral treatment slows down plaque formation and significantly reduces the number of bacteria that cause periodontitis. Adding antibacterial

light-activated treatment to the daily oral hygiene routine enhances the effectiveness of oral cleaning and helps when traditional oral hygiene methods are insufficient.

Lumoral treatment is advantageous for all individuals, yet it demonstrates particular benefits for patient groups grappling with challenging conditions, such as caries, gum disease, periodontitis, and peri-implantitis.

Lumoral has undergone rigorous scientific development and has a proven antibacterial effect. It is classified as a Class II medical device and has received CE approval as well as the recommendation of the Finnish Association of Dental Hygienists (FADH).

Both Lumoral and Lumoral Junior – developed for children over the age of three years – are available to buy now in the UK via iDentalOnline Supplies Ltd. at <https://www.identalonline.com/>.

Supporting career development for dental therapists

Clyde Munro understands what it takes to achieve successful career development as a dental therapist, which is why we offer a dedicated educational programme for individuals joining Scotland's leading dental group.

The year-long initiative builds dental therapists' existing skills, helping you work confidently within your full scope of practice for exceptional patient care. It puts prevention at the fore, covering a wide range of topics including fluoride varnish application and

fissure sealants, restorations and extractions of deciduous teeth, periodontal treatment, taking radiographs and so much more.

Dental therapists also have access to clinical support whenever needed, with a network of highly skilled clinicians available to ask questions and seek advice from.

With Clyde Munro, dental therapists can join a practice full-time without compromising their career progression. Find out more from our team today!
