

New centre of excellence for leading dental infection control business

In November 2020 the UK's leading dental infection control business – Dentisan, was acquired by Getinge, a leading global provider of products and systems that contribute to quality enhancement and cost efficiency within healthcare and life sciences.

One of Getinge's immediate aims was to relocate Dentisan to larger premises that would expand its manufacturing capacity and bring the whole Getinge UK business under one roof, an ambition that was realised on 31 January 2024. At the official opening ceremony members of the Getinge board were joined by representatives of Derby City Council and the Dentisan team, to witness the official opening by Carl Bennet, Principal Shareholder and Johan Malmquist, Chairman of the Getinge Board.

The new 79,000 sq/ft facility is located at St Modwen Park, just two miles from Derby city centre. The building is rated as 'Excellent' by BREEAM – the certification body for sustainable construction and includes production, warehousing, a laboratory, showroom, training area and office space. An EPC 'A' rating, auto sensor lighting and rainwater harvesting provide practical evidence of the building's overall energy efficiency, whilst 86 rooftop solar panels provide heating for the entire building.

Dentisan is one of the UK's leading providers of infection control products to the dental profession. For details of the full product range, manufactured in Derby, visit www.dentisan.co.uk.

Dentisan and Getinge UK teams

Propel your business forwards

Looking for innovative technologies, clinically proven products and expert support to propel your dentistry and your business forwards? The Straumann Group can help!

The team will demonstrate the broad range of solutions available at the upcoming North of England Dentistry Show at Manchester Central in March. These will include various leading implant systems from Straumann, Anthogyr and Neodent, each optimised to enhance predictability, stability and aesthetics in different clinical situations.

Delegates will also be able to find out more about ClearCorrect, the premier aligner, which enables an unparalleled level of customisability and control for the clinician.

Finally, the Straumann Virtuo Vivo intraoral scanner will be demonstrated. Providing accuracy and easy handling, this is the ideal entry level scanner for dentists who wish to implement digital workflows for all the benefits these bring to patient care.

Don't miss the team at the North of England Dentistry Show to find out more!

For more details, visit www.straumann.com.

Relief from protruding orthodontic wires and brackets

Successful treatments with braces are made even better when the process is comfortable for patients. Alleviate the pains of protruding wires and brackets with the Kemdent Orthodontic Relief Wax.

Portable in a small, recyclable tin case, patients can simply apply the wax over any unwelcome elements to make the transition more forgiving in the first few weeks of their treatment, when discomfort is often at its greatest.

Simple to shape through

the warmth of their hands, it can be easily moulded into place on the metal edges of a bracket, protecting the gingiva and buccal tissue. It harmlessly breaks down and flakes away with time, or can be simply

peeled off. This way, patients can go about their day and remove or reapply the comforting solution either side of meals and sleep.

To learn more about Kemdent Orthodontic Relief Wax, and the opportunity to improve patient experiences with braces, contact the team today.

For more information about the leading solutions available from Kemdent, visit www.kemdent.co.uk or call 01793 770 256.
