An alternative to CPAP for OSA

The BDIA Dental Showcase saw the pre-launch of the O2Vent from OADS in the UK.

The stand was busy, with many dentists eager to learn how the device can benefit their patients. There is much demand for an alternative to the traditional CPAP machine for patients with obstructive sleep apnoea (OSA).

O2Vent offers patients a discreet and comfortable alternative treatment for OSA, allowing them to breathe through their mouth if the nose is blocked. If there is a blockage, air is drawn in through the device, allowing it to easily reach the back of the throat. Further to this, the device moves the lower jaw forward, to encourage a more open airway.

If you were unable to attend BDIA Dental Showcase, visit the website and get in touch for more information.

Tools for early cancer detection

At this year's BDIA Dental Showcase, attendees discovered the BeVigilant OraFusion System, which provides clinicians with an assessment to aid in the early detection of oral cancer.

Currently, the survival rate for oral cancer is 50%. This is due to delayed detection and late intervention. Detecting cancer in its early stages helps to dramatically increase survival rates to 90%.

While dental professionals are diligent in their work, it can be incredibly helpful to have a secondary pre-diagnostic check to produce a report of low, moderate or elevated levels of risk associated with oral cancer.

If you were unable to attend BDIA Dental Showcase, and would like more information about the BeVigilant OraFusion System, visit the website and get in touch with the team today.

Unified conical connection implants

The ultimate embodiment of over 30 years of implant knowledge and expertise, Adin's new UniFit unified conical connection implants combine the very best features of their tried and trusted Touareg S and Closefit implants in one.

UniFit spiral implants are tapered implants with a spiral tap that condenses bone during placement for immediate stability. Featuring two large variable threads to facilitate minimally invasive surgery and a bone condensing tapered self-taping tip for accurate placement, improved aesthetics and optimum load distribution, its unique design allows immediate function for all bone types. UniFit also features Adin's unique OsseoFix Calcium Phosphate blast surface treatment, built-in platform switch, back-tapered collar with micro-threads engineered to enhance bone regeneration, prevent bone loss and increase bone implant contact.

Comprising a friction grip 7° conical connection with six-position star shaped index, UniFit ensures solid abutment fixation that enhances the implant-abutment seal and minimises micromovements. Plus, it enables simple yet flexible implant and abutment alignment and supports self-guiding insertion for clear cut tactile feedback. Finally, UniFit's external geometry and surface is designed for immediate function and loading, and optimal stability in all bone types.

All for just £140 plus vat!
