

A joint summit for orthodontists and general dentists

Align Technology is bringing together UK and Irish orthodontists, general dentists, orthodontic and dental therapists and hygienists, to the Invisalign Live Summit on 7–8 June 2024 in London.

The event will give participants the opportunity to consider their work from a comprehensive perspective. Align advocates for a holistic treatment approach and supports the collaboration between orthodontists and general dentists to deliver doctor-directed care to patients. Teeth alignment extends beyond mere cosmetic concerns; it is in fact indispensable for the maintenance of optimal oral health. It can also be a stand-alone or be part of broader comprehensive ortho-restorative treatment plan.

The Invisalign Live Summit 2024 has taken ‘transformation’ as its overarching theme. The agenda focuses on the transformative potential of the latest digital technologies and solutions Align has introduced most recently – or will be previewing for the first time in the UK this year, including the new iTero Lumina intraoral scanner, or Invisalign with Minimal Attachments among others.

Over two days of education, the event will encompass keynote presentations from international speakers, 21 clinical breakout channels, panel discussions, and short conferences, curated for participants depending on their speciality, credentials and stage of Invisalign experience. There will also be a parallel team track for dental hygienists, dental therapists and orthodontic therapists.

More than 20 Invisalign specialists will be sharing a range of action-orientated clinical and practice growth strategies:

- Dr David Galler (USA), President of the US Academy of Clear Aligners
- Dr Donna Galante (USA), Orthodontist, Coach and Consultant
- Dr Guy Deeming (UK), Specialist Orthodontist
- Dr Marielle Blake (IRL), Consultant Orthodontist and Author
- Dr Emmanuel Dumu (BEL), Specialist Orthodontist,
- Dr Rohit Chaturvedi (AUS), Dentist and Lead Invisalign Expert, Asia Pacific
- Dr Tommaso Weinstein (ITA), Clinica Weinstein and Aligner Dental Academy
- Dr Corrine Attia (FRA), Surgeon and VP of the Alpha Omega Association

Participants will also be able to take part in practical activities in the hands-on Innovations Hub to discover more about some of Align’s latest solutions and products.

The Invisalign Live Summit is taking place at The Sancroft on 7–8 June 2024, a new, contemporary events venue in London designed to enhance learning in a comfortable and light-filled setting.

For more information about the event agenda, the full speaker line up, the Invisalign Awards entry criteria and to register, visit the following site: <https://cloud.emea.invisalign.com/Invisalign-live-2024>.

Sharing the leading imaging systems with clinicians

Carestream Dental offers their thanks to all the dental professionals who went to speak to them at the BDIA Dental Showcase, at the ExCeL London.

The event was enjoyed by all, and it was a brilliant opportunity to share some of Carestream’s leading imaging systems – like the CS 8200 3D Neo CBCT and the CS 7200 Neo Imaging Plate System – with clinicians that share Carestream’s passion for detail.

Both systems were on display alongside Carestream’s AI Insights tool, as delegates found out about the new heights their care could reach by combining the use of artificial intelligence and cloud-based technology.

The team were also happy to show how Carestream Dental can help to transform care from good to exemplary, meeting the imaging needs of any practice.

If you want to find out more about the systems seen at the BDIA Dental Showcase, or the other solutions Carestream Dental has to offer, contact the team today.

For more information on Carestream Dental visit www.carestreamdental.co.uk.

Full day bond apatite hands-on course in Bradford

Augma are running a Full Day Bone Cement Hands-on Course on Saturday 8 June at the Guide Post Hotel in Bradford, West Yorkshire.

It will be presented by Dr Lucio Faria who has been a National and International Speaker for Nobel Biocare since 2011, is a Surgical Master in Regenerative Implant Dentistry and has undertaken extensive postgraduate studies in prosthodontics, bone and soft tissue grafting, and Zygomatic implant surgery and rehabilitation.

Dr Faria will review four of the most common surgical protocols using Bond Apatite bone grafting cement, which sets immediately and is accompanied by minimally invasive surgical procedures that do not require a membrane.

Delegates will receive practical knowledge on how to perform socket grafting without flap reflection, lateral ridge augmentation and augmentation in the aesthetic zone.

The course includes a variety of resources, such as animated videos, recorded live

surgery demonstrations and clinical videos. Evidence based data histology shows how following the surgical protocols leads to clinical success and complete bone regeneration for the patient.

The course fee is £195 plus vat (including all course materials and refreshments).
