

## Create a beautiful and resilient restoration

In order to create a beautiful and resilient restoration with a straightforward workflow, clinicians should choose a high-performance composite which meets their patients' needs.

BRILLIANT Crios from COLTENE combines all the advantages of an innovative submicron hybrid composite

material with those of a CAD/CAM fabrication process. This offers reliability, aesthetics, and speed.

BRILLIANT Crios is the ideal choice for single tooth restorations in both the anterior and posterior region, including inlays, onlays, crowns, and veneers. Due to its shock absorbing properties it is also recommended for bruxism patients or implant supported crowns.

If you are looking for a solution which offers a broad range of uses in daily practice, visit the website to find out more or get in touch with the team today.

For more information, email [info.uk@coltene.com](mailto:info.uk@coltene.com) or call 0800 254 5115.

## Supporting progress and education

The British Endodontic Society (BES) was formed in 1963 in London and has been influential in the field of endodontics ever since. It supports its members through its Regional Meetings, Study Clubs, and Awards and Prizes.

By becoming a member, dental professionals with an interest in endodontics gain access to a wealth of experienced clinicians – all of whom have the common goal of progressing the field through the support, training, and education of their colleagues.

Demonstrating the society's passion for education, the Teachers of Endodontology and Early Career Groups were formed. These support both those who teach, and those who are new to endodontics to ensure the highest-possible quality education.

If you're interested in becoming a member, or would like to find out more, contact the BES team today. For more information about the BES, or to join, visit the website [www.britishendodonticsociety.org.uk](http://www.britishendodonticsociety.org.uk) or call 07762945847.

## Reliable support in complex endodontic situations

Complex endodontic re-treatment can be difficult to approach, especially when issues present after a previous root canal procedure. For help getting your patients out of pain quickly and effectively, work with EndoCare.

EndoCare's team includes a range of endodontic experts and specialists with advanced skills and experience in the field. They use evidence-based techniques and leading technologies to elevate the accuracy of their procedures.

As such, the team can address even the most advanced endodontic concerns and complications, ensuring your patient receives the highest standard of treatment

possible. Want to know more? Contact EndoCare on 020 7224 0999 or visit [www.endocare.co.uk](http://www.endocare.co.uk).

## Make recording the full depth of the sulcus a breeze

The materials you use are key to taking accurate physical impressions first time. With KemKat from Kemdent, you can record a patient's dentition with brilliant accuracy and ensure your impressions are outstanding every time.

KemKat is highly viscous, which makes recording the full depth of the sulcus a breeze.

Conveniently shaped into separable strips, you only need to break off the amount of impression compound you need with each

use. This way, even with partials or additions, you can minimise the waste you create.

Pair the KemKat impression compound with the brand-new Dental Water Bath, an effective temperature-controlled solution that easily fits your workflow. It features a removable water chamber with a lift-out basket. Plus, it's fully autoclavable for optimal cross-infection control.

To learn more about physical impression solutions from Kemdent, contact the team today.

For more information about the leading solutions available from Kemdent, visit [www.kemdent.co.uk](http://www.kemdent.co.uk) or call 01793 770 256.
