Correction to: *Eye* <https://doi.org/10.1038/s41433-021-01803-8>, published online 12 October 2021

In paragraph 3, a new footnote [5] with a citation for the Cochrane Review has been added.

‘Interventions for preventing ophthalmia neonatorum’ the authors aimed to determine if any type of systemic or topical eye medication is better than placebo or no prophylaxis in preventing ophthalmia neonatorum, and if any one medication is better than another [5]. The review included 30 trials with a total of 79,198 neonates; 12 of which were undertaken in LMICs. This diverse group of trials spanned a very long time period with seven trials between 1940 and 1960 and 11 between 2000 and October 2019. There was also a wide range of prophylactic interventions with 14

different prophylactic regimens involving 12 different prophylactic agents.

This means that the references following footnote [5] have now all moved up a number in the text and references section.

The original article has been corrected.
