Correction to: *International Journal of Impotence Research* (2023) 35:309–322 <https://doi.org/10.1038/s41443-023-00686-5>, published online 30 March 2023

The first sentence of the abstract has been corrected. Please find the corrected text below.

Demographically diverse surveys in the United States suggest that 10–15% of non-voluntarily circumcised American males wish that they had not been circumcised [1, 2]. Similar data are unavailable in other countries. An unknown proportion of circumcised males experience acute circumcision-related distress; some attempt to regain a sense of bodily integrity through non-surgical foreskin restoration.
