Publisher Correction: Quantum coherence of multiple excitons governs absorption cross-sections of PbS/CdS core/shell nanocrystals

Hirokazu Tahara¹, Masanori Sakamoto¹, Toshiharu Teranishi ¹ & Yoshihiko Kanemitsu ¹

Correction to: *Nature Communications*; <https://doi.org/10.1038/s41467-018-05698-0>; published online: 09 Aug 2018

The original version of this Article contained an error in the seventh sentence of the second paragraph of the “TA amplitudes for double pump-pulse excitation” section of the Results, which incorrectly read ‘The absorption cross-sections of the transitions from the single exciton state to the biexciton and triexciton states are denoted by σ' and σ'' , respectively.’ The correct version states ‘ σ'' ’ in place of ‘ σ' ’.

The ninth and tenth sentences of the same paragraph originally incorrectly read ‘The most important issue of this work is to clarify whether the multiple exciton absorption cross-sections σ' and σ'' are equal to σ or not. The black dotted curves in Fig. 3b, c show the predicted results of the TA amplitudes by assuming identical cross-sections, i.e., $\sigma = \sigma' = \sigma''$.’ The correct version states ‘ σ' and σ'' are equal’ instead of ‘ σ' and σ'' are equal’ and ‘ $\sigma = \sigma' = \sigma''$ ’ in place of ‘ $\sigma = \sigma' = \sigma''$ ’.

This has been corrected in both the PDF and HTML versions of the Article.
