Addendum to: *Nature Communications* <https://doi.org/10.1038/s41467-019-08777-y>, published online 18 February 2019.

Following re-sequencing of the miSFIT constructs used in the paper, two of the construct variants inserted into the 3'UTR of PD-1, namely '12C' and '17A, 18G', have been found to contain additional insertions not present in the other construct variants. The data points corresponding to these constructs in Fig. 2c, f and Supplementary Fig. 9 are therefore no longer valid. However the overall conclusion that the miSFIT system allows step-wise control over gene expression levels remains unaffected by these errors. Updated versions of Fig. 2 and Supplementary Fig. 9 are presented below as Figs. 1 and 2 respectively.
