Published online 15 February 2018

In the initially published version of this article, the following sentence was incorrect: “Studies that have compared equivalent exposures to alcohol in adolescent and adult animals have found that the effects of alcohol exposure during adolescence are generally not evident or are less pronounced than after comparable alcohol exposure in adulthood”. The sentence should have read: “Studies that have compared equivalent exposures to alcohol in adolescent and adult animals have found that the effects of alcohol exposure during adulthood are generally not evident or are less pronounced than after comparable alcohol exposure in adolescence”. The sentence has been corrected in the HTML and PDF versions of the article.
