that predict their response to potential treatments, allowing selection of treatments that are highly likely to be effective. A prospective study is now needed to test this potentially transformative approach to psychiatric therapeutics. □

PODCAST

Forum: Repurposing viral immunity to fight cancer

Senior editor Irene Jarchum talks to Cliona Rooney about a recent paper in which Mark Cobbold and colleagues describe an antibody-mediated strategy to retarget virus-specific T cells against tumors. The paper was published in *Nature Biotechnology*; it can be read at <https://doi.org/10.1038/s41587-019-0404-8>.

RESEARCH HIGHLIGHTS

Papers from the literature

Selected by the *Nature Biotechnology* editors.

Mapping the fine-scale organization and plasticity of the brain vasculature

Kirst, C. et al. *Cell* <https://doi.org/10.1016/j.cell.2020.01.028> (2020).

Machine learning analysis of whole mouse brain vasculature

Todorov, M. I. et al. *Nat. Methods* <https://doi.org/10.1038/s41592-020-0792-1> (2020).

A deep learning approach to antibiotic discovery

Stokes, J. M. et al. *Cell* <https://doi.org/10.1016/j.cell.2020.01.021> (2020).

Transgenic rice overproducing Rubisco exhibits increased yields with improved nitrogen-use efficiency in an experimental paddy field

Yoon, D. et al. *Nat. Food* <https://doi.org/10.1038/s43016-020-0033-x> (2020).

Whole-neuron synaptic mapping reveals spatially precise excitatory/inhibitory balance limiting dendritic and somatic spiking

lascone, D. M. et al. *Neuron* <https://doi.org/10.1016/j.neuron.2020.02.015> (2020).
