Correction to: *Scientific Reports* https://doi.org/10.1038/s41598-018-33814-z, published online 18 October 2018

This Article contains errors in Figures 1, 2, 3, 4, 5, 6, 7 and 10, where images are unlabelled. The correct Figures 1, 2, 3, 4, 5, 6, 7 and 10 appear below as Figures 1–8 respectively.

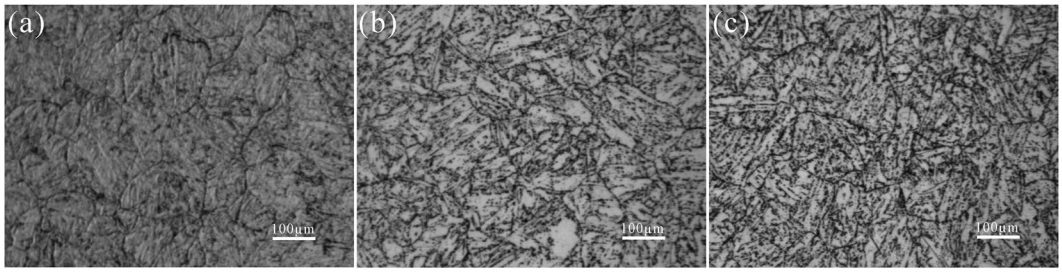

Figure 1. OM micrographs of P92 heat-resistant steels without aging (**a**) and following thermal aging for 3000 h (**b**) and 8000 h (**c**).

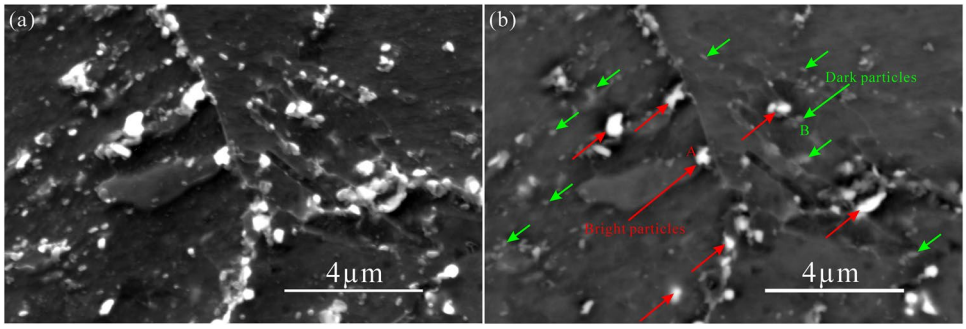

Figure 2. SEM (**a**) and SEM-BSE (**b**) micrographs of P92 heat-resistant steels following thermal aging for 3000 h.

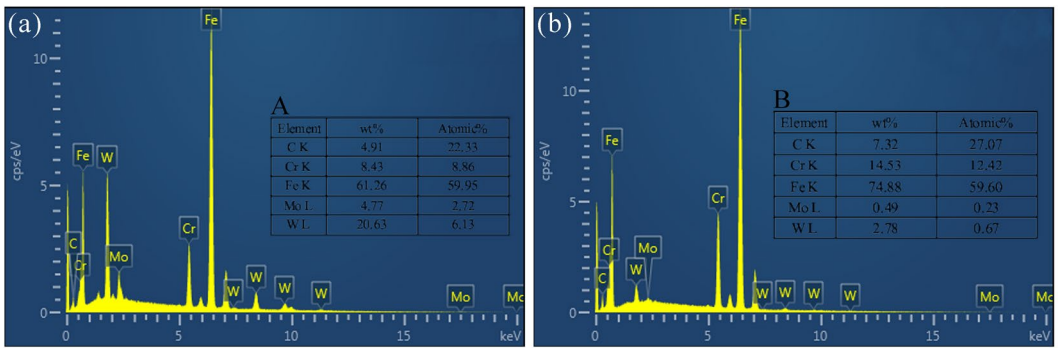

Figure 3. SEM-EDS diagrams of bright particles A (**a**) and dark particles B (**b**) in P92 heat-resistant steels following thermal aging for 3000 h.

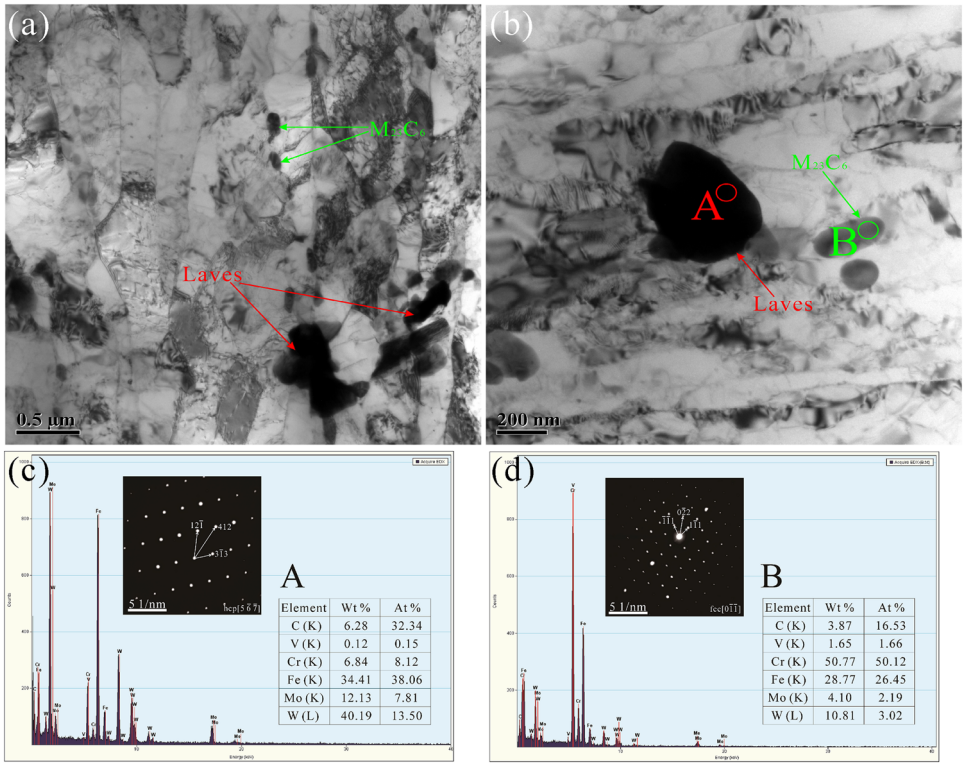

Figure 4. TEM micrographs of P92 heat-resistant steels following thermal aging for 3000 h (**a**,**b**) and the corresponding SAED patterns and EDS diagrams of particles A (**c**) and B (**d**).

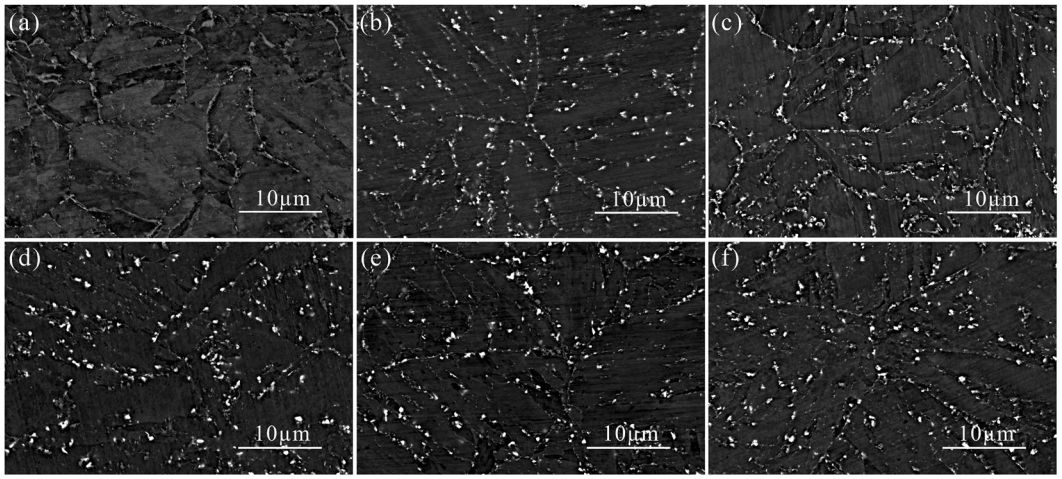

Figure 5. SEM-BSE micrographs of P92 heat-resistant steels following thermal aging for 0 h (**a**), 1500 h (**b**), 3000 h (**c**), 4000 h (**d**), 5500 h (**e**), 8000 h (**f**).

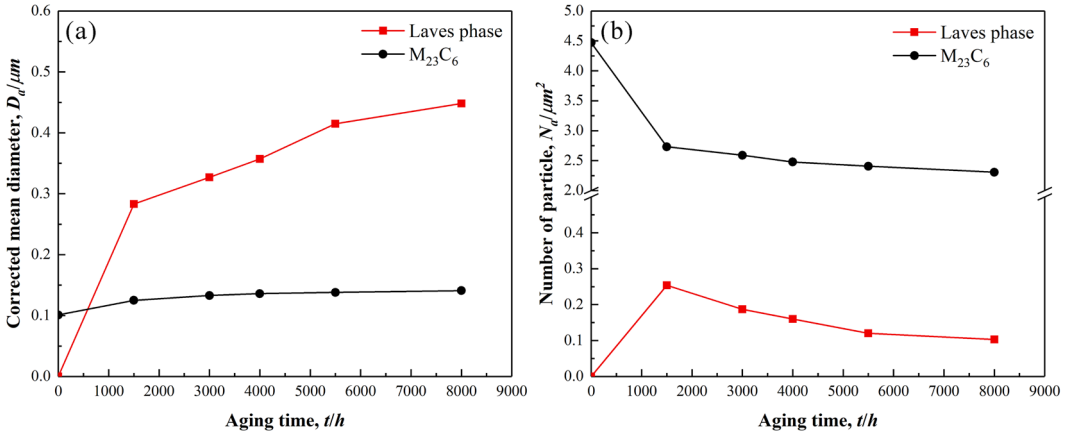

Figure 6. Average diameter of precipitates (**a**) and the number of precipitates per unit area (**b**) of $M_{23}C_6$ carbides and Laves phases in P92 heat-resistant steels following thermal aging for different times.

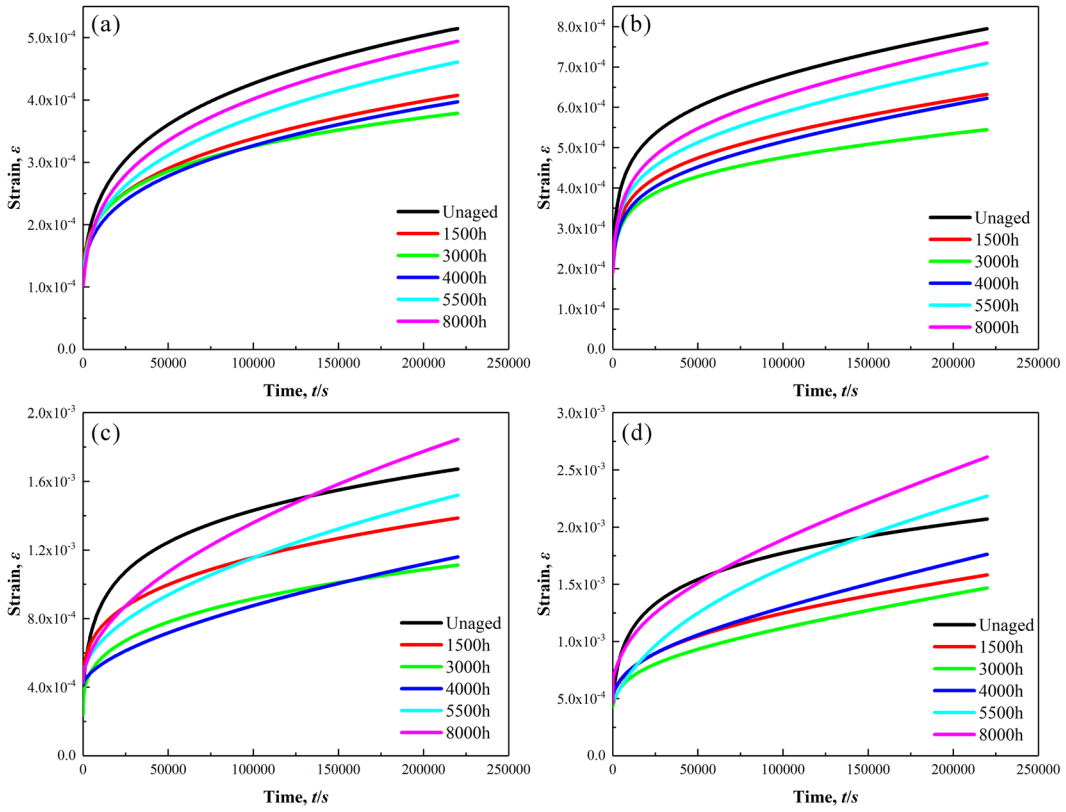

Figure 7. Creep curves of P92 heat-resistant steel specimens following thermal aging for different times at 923 K under stress of 20 MPa (**a**), 35 MPa (**b**), 65 MPa (**c**) and 75 MPa (**d**).

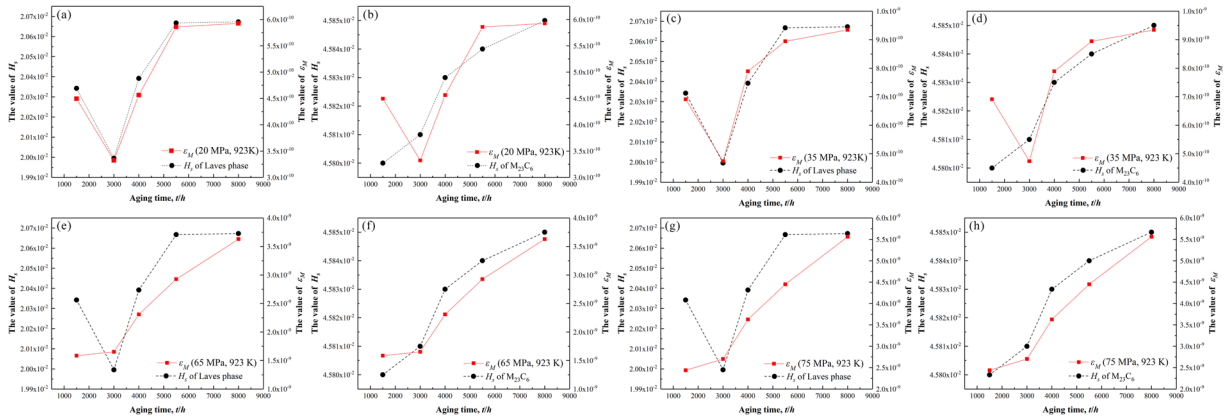

Figure 8. Comparison between the variation trends of ε_M values for P92 heat-resistant steel at 923 K under different stresses (20 MPa (**a**,**b**), 35 MPa (**c**,**d**), 65 MPa (**e**,**f**) and 75 MPa (**g**,**h**)) and H_s values for Laves phases and $M_{23}C_6$ carbides.
