Author Correction: Triple-negative invasive breast carcinoma: the association between the sonographic appearances with clinicopathological feature

Jia-wei Li, Kai Zhang, Zhao-ting Shi, Xun Zhang, Juan Xie, Jun-ying Liu & Cai Chang

Correction to: *Scientific Reports* <https://doi.org/10.1038/s41598-018-27222-6>, published online 13 June 2018

The original version of this Article contained errors in the Abstract.

“The independent sonographic features for the TN subgroup included regular shape (odds ratio, OR = 2.14, $p = 0.007$), no spiculated/angular margin (OR = 1.93, $p = 0.035$), posterior acoustic enhancement (OR = 2.14, $p = 0.004$), and no calcifications (OR = 2.10, $p = 0.008$).”

now reads:

“The independent sonographic features for the TN subgroup included regular shape (odds ratio, OR = 1.73, $p = 0.033$), no spiculated/angular margin (OR = 2.09, $p = 0.01$), posterior acoustic enhancement (OR = 2.09, $p = 0.004$), and no calcifications (OR = 2.11, $p = 0.005$).”

Additionally, this Article contained an error in section (B) of the Figure 6 legend.

“(B) The uncircumscribed margin with cellular prominence (HE stain, original magnification, $\times 4$).”

now reads:

“(B) The uncircumscribed margin with cellular prominence (HE stain, original magnification, $\times 40$).
