Author Correction: Application of a convolutional neural network for predicting the occurrence of ventricular tachyarrhythmia using heart rate variability features

Getu Tadele Taye, Han-Jeong Hwang & Ki Moo Lim

Correction to: *Scientific Reports* <https://doi.org/10.1038/s41598-020-63566-8>, published online 21 April 2020

This Article contains an error in the order of the Figures. Figures 1 and 2 were published as Figures 2 and 1 respectively. The Correct Figures 1 and 2 appear below. The Figure legends are correct.

Published online: 08 July 2020

Figure 1. (A) CNN architecture with an input layer, four hidden layers, and a flatten input that will be fed to dense layers. (1D: one dimension) (B) The architecture of our ANN.

Figure 2. (A) Means and standard deviations of the prediction accuracies of each algorithm. Single asterisks (*) indicates a statistically significant difference between the prediction accuracies of different algorithms (CNN > ANN, SVM, and KNN, $p < 0.001$). (B) ROC AUCs (receiver operating characteristic area under curves) of CNN, ANN, SVM, and KNN to predict VTA 60 seconds before the occurrence. TPR: True Positive Rate and FPR: False Positive Rate accuracies.
