Author Correction: Induction of posterior vitreous detachment (PVD) by non-enzymatic reagents targeting vitreous collagen liquefaction as well as vitreoretinal adhesion

Mithun Santra, Maryada Sharma, Deeksha Katoch, Sahil Jain, Uma Nahar Saikia, Mangat R. Dogra & Manni Luthra-Guptasarma

Correction to: *Scientific Reports* <https://doi.org/10.1038/s41598-020-64931-3>, published online 19 May 2020

The below paragraph contains references to articles hypothesising the same concept which has now been experimentally demonstrated; these were omitted from the Discussion section of the Article.

“The concept that we experimentally demonstrated (combination pharmacologic vitreolysis achieved by concomitant performance of vitreous gel liquefaction and vitreous-retinal dehiscence) has been previously theoretically proposed^{1,2}. Further, the possibility of combining enzymatic reagents for induction of posterior vitreous detachment (PVD), using hyaluronidase for liquefaction and plasmin for dehiscence has been successfully tested in diabetic rats³”.
