This Article contains an error in Figure 2 where the uncertainty values for the long-term model simulation are

The correct Figure 2 appears below as Figure 1. Table 1 contains the corresponding feedback values.

Figure 1. Decomposition of the longwave cloud feedback into five components: the cover of opaque clouds (C_{Opaque}) , the altitude of the opaque clouds $(Z_{T_{\mathrm{Opaque}}})$, the cover of thin clouds (C_{Thin}) , the altitude of thin clouds (E_{Thin}) , the emissivity of thin clouds (E_{Thin}) . The observed short-term (blue) is derived from space lidar data between 2008 and 2014. The simulated short-term (red) is derived from model + lidar simulator simulation in present-day climate (AMIP) between 2008 and 2014. The simulated long-term (dark red) is derived from model simulations in present-day climate (AMIP) and in a warmer future climate (AMIP + 4 K). All the results are based on monthly mean data over global ocean. Lines on bars are the 95% confidence interval.
