Correction to: *Scientific Reports* <https://doi.org/10.1038/s41598-020-72306-x>, published online 17 September 2020

The original version of this Article contained an error.

The p value stated in the text for differences in fasting blood sugar, between non-overweight and obese groups, was incorrect. The text,

“There was no statistically significant difference in the level of ALT (98.9 ± 34.6 vs. 96.3 ± 24.1 $p = 0.76$), serum vitamin B12 (559 ± 417.1 vs. 433 ± 185.4 $p = 0.18$), fasting blood sugar (90.76 ± 8.45 vs. 98.1 ± 4.2 , $p = 0.12$) or the serum homocysteine levels (13.2 ± 4.0 vs. 14.04 ± 1.80 $p = 0.49$) between the non-overweight and obese groups.”

now reads,

“There was no statistically significant difference in the level of ALT (98.9 ± 34.6 vs. 96.3 ± 24.1 $p = 0.76$), serum vitamin B12 (559 ± 417.1 vs. 433 ± 185.4 $p = 0.18$) or the serum homocysteine levels (13.2 ± 4.0 vs. 14.04 ± 1.80 $p = 0.49$) between the non-overweight and obese groups. Though the fasting blood sugar (90.76 ± 8.45 vs. 98.1 ± 4.2 , $p = 0.0001$) was significantly different, there was only one patient whose fasting blood sugar placed them within range of a diabetes mellitus diagnosis (138 mg/dl, in the non-overweight group).”

This has been corrected in the PDF and HTML versions of the Article.
