Author Correction: Deficit saline water irrigation under reduced tillage and residue mulch improves soil health in sorghum-wheat cropping system in semi-arid region

Pooja Gupta Soni, Nirmalendu Basak[✉], Arvind Kumar Rai[✉], Parul Sundha, Bhaskar Narjary, Parveen Kumar, Gajender Yadav, Satyendra Kumar & Rajender Kumar Yadav

Correction to: *Scientific Reports* <https://doi.org/10.1038/s41598-020-80364-4>, published online 21 January 2021

The original version of this Article contained an error in the order of the Figures. Figures 1 and 2 were published as Figures 2 and 1. The Figure legends were correct.

The original Figures 1 and 2 and accompanying legends appear below.

The original Article has been corrected.

Published online: 19 April 2021

Figure 1. Influence of tillage, irrigation and mulch on microbial biomass carbon, nitrogen and carbon and nitrogen ratio (MBCN) of soils after sorghum and wheat harvest; different uppercase letters (A, B) denote significant differences (** $P < 0.01$, *** $P < 0.001$, Tukey's HSD test). Data are means over 2 years. Irrigation applied only in wheat, sorghum was grown as rainfed; CWR: per cent water requirement for wheat; $SE_m \pm$: standard error.

Figure 2. Influence of tillage, irrigation and mulch on dehydrogenase, alkaline phosphatase and urease activities; different uppercase letters (A, B) denote significant differences (** $P < 0.01$, *** $P < 0.001$, Tukey's HSD test). Data are means over 2 years. Irrigation applied only in wheat, sorghum was grown as rainfed; CWR: per cent water requirement for wheat; SE_m ±: standard error.
