Figure 2. Molecular phylogenetic tree of *dsx* and *DMRT* homologues. Bayesian tree of *dsx* and *DMRT* of insects and crustaceans was constructed based on the OD1 sequences (135 bp with no gaps). Numbers shown above branches represent the Bayes posterior probabilities. Bootstrap values (1000 replicates) are shown below branches to indicate the level of support in the ML method. An asterisk indicates that a node is not supported by the ML method.
