Correction to: *Scientific Reports* <https://doi.org/10.1038/s41598-021-01265-8>, published online 09 November 2021

The original version of this Article contained an error.

The number and surface areas of respirators measured by Roberge et al.⁴³ were incorrectly quoted. Roberge et al. measured nine (not 12) respirators.

As a result, in the Results and discussion section, under the subheading ‘Face Velocity’,

“For example, Roberge et al.⁴³ reported the total inner-layer surface area of 12 N95 respirators as ranging from 108 to 205 cm² (mean \pm 2 standard deviations, 146 \pm 26 cm²). The mean area would result in a mean face velocity of 7.3 \pm 1.9 cm s⁻¹ for the flow rate of the NIOSH method. However, this mean area is an overestimate; a more accurate calculation would subtract the area of the mask in contact with the wearer’s face, which does not contribute to filtration. If this region comprised 10% of the inner-layer area, it would increase the mean face velocity to 8.1 \pm 2.0 cm s⁻¹. In this section and in Fig. 5, we conservatively use a range of 5.4 to 10.1 cm s⁻¹, encompassing both of the above estimates, when comparing the face velocities relevant to the NIOSH standard with the ASTM F2299/F2100 standard.”

now reads:

“For example, Roberge et al.⁴³ reported the total inner-layer surface area of nine N95 respirators as ranging from 158 to 255 cm² (mean \pm 2 standard deviations, 197 \pm 57 cm²). These values result in a mean calculated face velocity of 7.3 \pm 2.0 cm/s for the flow rate of the NIOSH method. However, this mean area is an overestimate, a more accurate calculation would subtract the area of the mask in contact with the wearer’s face, which does not contribute to filtration. If this region comprised 10% of the inner-layer area, it would increase the mean face velocity to 8.1 \pm 2.2 cm/s. In Fig. 5, we approximate this range of mean and standard deviations as 5.5 to 10 cm/s, when comparing the face velocities relevant to the NIOSH standard with the ASTM F2299/F2100 standard.”

The original Article has been corrected.
