npj 2D Materials and Applications (2017)1:31; doi:10.1038/s41699-017-0026-2

Erratum to: npj 2D Materials and Applications (2017); doi 10.1038/s41699-017-0009-3; Published 22 May 2017

Figure 3 contained an error in the labeling of the y-axis (pressure) of the bottom right-hand panel. This labeling has now been

corrected in the revised figure, in the HTML and PDF versions of this article.

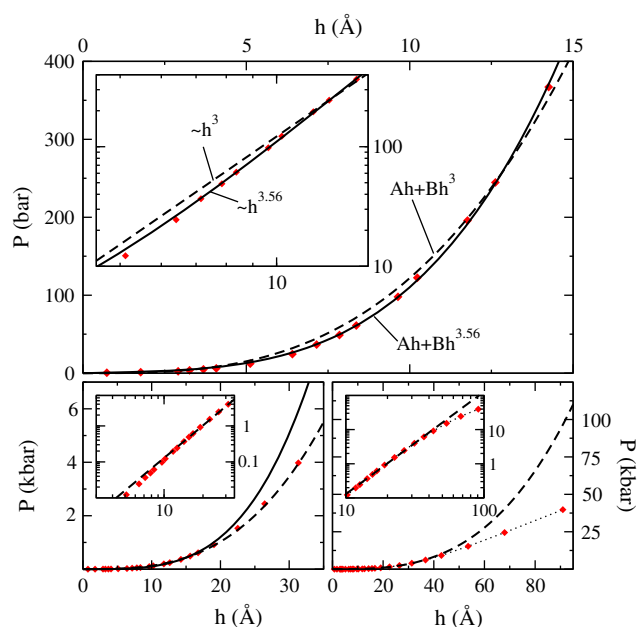

Fig. 3 Pressure as a function of the midpoint deflection obtained from simulations (symbols) on three different deflection ranges. The solid line is a best fit according to Eq. 12 over the interval $h \in [0, 15]$ Å, while the dashed lines are best fits according to $P = Ah + Bh^3$ over the interval $h \in [0, 15]$ Å (upper panel) and $h \in [15, 35]$ Å (lower panels), respectively. These insets are the same plots in log–log scale
