Author Correction: Psychological measures aren't toothbrushes

Check for updates

Malte Elson , Ian Hussey, Taym Alsalti & Ruben C. Arslan

Correction to: *Communications Psychology* <https://doi.org/10.1038/s44271-023-00026-9>, published online 17 October 2023

In the original version of Fig. 2, the lower panel contained a plot in which all measures of Shannon entropy were incorrectly normalized; normalization in that version used the log of the number of times each measure was used. The lower panel in the corrected Fig. 2 plots Shannon entropy normalized by the number of measures that were used at least once.

The caption for Fig. 2 has been corrected accordingly. The sentence: “The literature does not converge on standards over time, but rather is becoming increasingly fragmented.” Has been replaced with: “The literature does not converge on standards over time, but rather remains fairly consistently fragmented.”

The Supplementary Information file contained a typesetting error so that Equation number 1 appeared once in LaTeX notation and once, additionally, typeset appropriately. The corrected Supplementary Information file does not contain the superfluous LaTeX notation.

After correcting this mistake, we see a less pronounced increase in normalised entropy over time and overall higher levels of entropy (i.e. higher fragmentation).
