ADDENDUM

Post-traumatic Syringomyelia

By J. D. VERNON, J. R. SILVER and A. OHRY
Volume 20, Number 6. Pages 339-364

The authors regret that these case reports were omitted from the above paper.

TABLE I continued

Name	Age at Injury	Level	Interval to New Symptoms	New Symptoms	New Motor or Sensory Signs	(years) Duration of Follow up After Injury
G.M.	22	Incomplete L3	5 years	Loss of feeling left arm and chest followed by pain in left chest and shoulder.	Dissociate sensory loss C6-D4 (left). 5 years later spread to C6-D2 on the right, later weakness right shoulder.	28
J.D.	30	Complete D6	9 years	Weakness right arm, numbness and sweating left hand followed by weakness in the left hand.	Dissociate sensory loss C3-D7 on the right, C1-D3 on the left followed by bilateral dissociate trigeminal lesion.	11
A.Bu.	22	Incomplete D12	7 years	Paraesthesia in the right hand leading to pain in the right shoulder. Loss of pain sensation in the right trunk and right arm.	Right dissociate sensory loss C4-D12.	8
S.I.	40	Incomplete C6 Complete D3	1 year	Pain in shoulder spreading to face. Diplopia (loss of taste ant. two-thirds of tongue). Loss of feeling right upper limb, lesser degree of involvement to the left side.	Impaired sensation, right trigeminal right upper limb then left upper limb. Diplopia, loss of taste ant. two-thirds of tongue and sensation in the mouth on the right. Bilateral sensory involvement of the face last.	17
J.R.	50	Complete D7	1 year	Pain in the right back. Weakness of the left hand then loss of pain sensation. Left shoulder pain later.	Severe global weakness left hand. Dissociate sensory loss C2-D7 (motor power improved but sensation did not).	10

The following corrections to this paper should also be noted.

On page 358 in the paragraph beginning 'In D.K., an incomplete paraplegic....' C2 should read D12.

On page 361 the last sentence of the first paragraph should read '.... with a cyst in the medulla (Fig. 5). Another case is S.I., see Table 1 and Figures 6 and 7.'
