3D ROOT FILLING SYSTEM

Smartseal has gained approval for its endodontic root filling systems from the United States regulatory body, the Food and Drugs Administration (FDA).

Smartseal is a simple two-part endodontic root filling system using radiopaque hydrophilic polymers. The propoint obturation points expand with the natural water present in the

tooth (in the lateral direction only) and when coupled with the smartpaste dental sealer, which also expands to fit the canal and fill those lateral canals, dentists get an excellent three-dimensional seal.

The smartseal range also includes bio-compatible root canal sealer, smartpaste bio, smartpaste and smartpointPT.

INTUITIVE COMMUNICATION SYSTEM

The EasyTouch communication system from TENO offers a wide range of functions with an award-winning, intuitive design.

Dental professionals can control patient communication directly on the EasyTouch unit. A wireless foot control can be used to operate all functions hands-free without causing a breach in infection control during treatment. Forwards and backwards foot movements navigate a cursor through the pushbutton pairs and lateral movements switch functions.

The EasyTouch also offers an integrated implantology and endodontics function. The dentist uses EasyTouch to control the implantology motor integrated in the treatment centre, as well as torque and speed. With the endodontics function, EasyTouch displays the complete file menu.

Operation is very simple with self-explanatory menus and icons. The menu guide can be configured according to individual needs. The EasyTouch can also be upgraded with future technologies.

HIGHLY CONCENTRATED IMPRESSION DISINFECTANT

Cavex Impresafe is a new disinfection system for alginate, silicone and polyether impressions.

Cavex ImpreSafe only needs three minutes to kill bacteria, fungi and viruses. It is highly concentrated: one litre of ImpreSafe equals 33 litres of ready-to-use disinfection fluid, saving on storage space and economical resources.

Cavex ImpreSafe is easy to use and has a neutral smell. It is also harmless to the impression surface.

The convenient package for the dental practice includes a disinfection container, one litre of disinfection fluid and a timer.

MOUTHWEAR FOR SPORTY PATIENTS

Under Armour Performance Mouthwear, comprising mouthpieces for non-contact sport and mouthguards for contact sports, incorporates Bite Tech's Armourbite reverse wedge technology. This can help patients to:

- Improve their athletic performance
- Reduce athletic stress
- Enjoy greater focus, stamina and strength during training and physical activity
- Protect their teeth during sports.

Custom-fitted by dentists, and suitable for both adults and children over eight, Under Armour Performance Mouthwear is very comfortable to wear, with many patients commenting on its weightless feel.

Bite Tech is bringing Under Armour Performance Mouthwear to UK dentists in partnership with Nuview. Dentists interested in becoming an approved provider should contact Nuview.
