

New products and focus on implants and imaging

Please send trade news information and illustrations to Arveen Bajaj at the *BDJ*, Nature Publishing Group, The Macmillan Building, 4-6 Crinan Street, London N1 9XW.

Trade news is provided as a service to readers using text and images from the manufacturer, supplier or distributor and does not imply endorsement by the *BDJ*. Normal and prudent research should be exercised before purchase or use of any product mentioned.

ACCESS ALL AREAS

Recently developed and launched in the USA, Dentsply are now bringing the new Cavitron Thinserts to the UK. With a tip diameter 40% thinner than the existing Slimline insert, this new tip allows excellent access in all areas, superior biofilm removal

and greater patient comfort.

The insert works with any 30k Cavitron ultrasonic scaler to reach interproximal surfaces, concavities and locations with tight tissue attachment, without losing the tactile sensation you rely upon. They can be used at low to high power.

NEW DECONTAMINATION WEBSITE LAUNCHED

Isopharm Sentry Ltd (ISL) has launched a new website, www.htm01-05.com, to provide information, guidance and a choice of products from a range of suppliers for dental practitioners, both in NHS and private practice, as they establish best practice for decontamination in accordance with HTM 01-05.

The new website acts as an educational resource for HTM 01-05 as well as a product source. ISL can offer impartial advice on a host of decontamination topics ranging from lists of decontamination machine manufacturers to lists of Competent Persons (Decontamination).

Tests specified within HTM 01-05 are explained and choices of different product types that can be used for these tests are highlighted, together with their advantages and disadvantages. Some of this information is also reproduced in a booklet, the 'HTM01-05 validation practical guide', available on request from the company.

WIDE RANGING DIAGNOSTIC CAPABILITIES

The Vatech & E-Woo digital imaging range from Indent Systems offers a comprehensive choice of digital panoramic, cephalometric and CT systems, with options starting from just £16,000.

The Pax Primo is the entry level digital panoramic unit. It enables practices to obtain image quality regardless of the patient's head position and the size of their dental arches.

The Pax Uni-3D is the entry-level cone beam unit which combines panoramic and small field of view cone beam facilities in one unit. It can be easily upgraded with a cephalometric facility when required. The Pax Duo 3D unit is the mid-range option with a wider selection of fields of view, while the Pax Reve 3D is the top-of-the-range unit offering an even wider

range of diagnostic capabilities. They all automatically switch between their panoramic and cone beam sensors as appropriate, enabling practices to scan all types of images using just one unit.

PRE-PROGRAMMED SETTINGS

PracticeWorks Kodak 9500 3D Cone Beam Scanner delivers high quality, anatomically correct image capture of both full dual jaw and craniofacial aspects. Combining innovation with ease of use, the Kodak 9500 can be

used for numerous dental applications including periodontics, orthodontics and oral surgery.

Cone Beam 9500 offers professionals a patient friendly platform with face to face positioning, whilst fast scanning reduces risk of patient movement. A large field option generates high resolution images

with reduced overall exposure to X-rays.

It has time saving pre-programmed settings and motorised height adjustment features and image selection can be made directly on a computer's easy to navigate interface for swift dental and craniofacial anatomy in a single exam.
