

THE MOST POWERFUL TURBINE ON THE MARKET

The T3 Racer, Sirona's new turbine, was developed and produced in Germany with a focus on the major demands in dental practices while meeting highest quality standards. Sirona has expanded its instruments product line with a powerful new turbine, featuring an excellent price-performance ratio, which will impress cost-conscious users around the world.

The new T3 Racer is the most powerful turbine currently available. With air pressure of 3.3 bar, it reaches a power output of 30 watts. Users require less strength, have more control, and can work in greater comfort. In many countries, the turbine is the most frequently used instrument that a dentist may use 50 to 100 times a day. With its ceramic ball bearings and the new 4-nozzle spray, it is also extremely quiet.

The T3 Racer therefore meets the highest demands. The sleeve of the ergonomically shaped, well-balanced

turbine consists of rust-proof, durable stainless steel. This gives it a pleasant feel and quality look. It is also easy to clean, thermally disinfect and sterilise. The PHS (protective head system) also adds a hygiene advantage – it prevents fluids from being suctioned into the turbine head by creating a vacuum when the turbine is stopped. The push-button clamping system allows the burr to be replaced quickly and easily with no additional tools.

The T3 Racer turbine has a permanent connection and is available with a 4-hole Midwest or a 2- or

3-hole Borden connection, allowing it to be compatible with all common treatment centres. The attractive price-performance ratio makes the turbine the perfect way to enter the world of Sirona products.

For more information call Sirona Dental Systems on 0845 071 5040 or email info@sironadental.co.uk.

INCREASE COMPLIANCE AND KEEP PATIENTS HAPPY

Waterpik International Inc. is providing consumers with a £5 voucher that is valid until 31 December 2014, for units sold from the practice or high street.

Choose from:

- The Waterpik Water Flosser – clinically proven to remove up to 99.9% of plaque from treated areas in just three seconds
- Sensonic Professional Plus Electric Toothbrush – 99% more effective than a manual brush
- The Waterpik Complete Care – combining the advantages of both of the above in a convenient, contemporary and compact design. This premium product is up to 159% more effective than a manual toothbrush for improving gingival health.

Recommend Waterpik Water Flossers and stock up on Waterpik leaflets. Not only will your patients receive a discount, but the vouchers will also help you to make quicker and easier referrals.

Request your leaflets at www.waterpik.co.uk. Waterpik products are available in Boots and at Superdrug stores across the UK and Ireland.

A MORE ACCURATE ALGINATE

Based on GC's extensive knowledge of alginate materials, GC Aroma Fine Plus has been developed to offer users final impressions of the highest quality combined with an easier and faster mixing.

With an advanced formulation, it's easy to incorporate the water into Aroma Fine Plus powder in just THREE seconds and the dust-free formulation allows fast and vigorous mixing for a smooth bubble free mix. Being truly thixotropic, Aroma Fine Plus reduced patient gagging, as it stays in place without dripping or running down the patient's throat during the setting phase, at the same time it flows under pressure into the narrowest of areas capturing the highest detail.

Being laboratory optimised, Aroma Fine Plus is compatible with a wide range of type IV dental stones for optimised detail reproduction and an incredibly smooth model surface.

This spearmint flavoured alginate is available in normal or fast set for personal preference. The properties of GC Aroma Fine Plus all add up to an alginate impression material that makes it quicker and easier to take exceptionally accurate impressions.

For further information contact GC UK on 01908 218 999.

FOR WHEN BAD BREATH BECOMES A PROBLEM

Halitosis or bad breath may be 'invisible' but its effects can be troublesome for the sufferer. While it may relate to an underlying medical condition, it may also indicate problems with an individual's dental hygiene and other oral conditions.

CB12 offers relief from the symptoms of bad breath for up to 12 hours by combating the gases known as volatile sulphur compounds produced by bacteria in the oral cavity. With its low concentrations of zinc acetate and chlorhexidine, plus

fluoride, CB12 comes in a pleasant mint menthol or mild mint menthol flavour and is available in three sizes.

Although invisible, bad breath can have a huge impact on patients' lives. Discover the benefits of CB12 today.

For more information on CB12 and the extensive research behind it, visit www.cb12.co.uk.
