

AT THE FOREFRONT OF TEACHING THE ART AND SCIENCE OF DENTISTRY

Established in 2006 by US-trained specialist, Dr Basil Mizrahi, Mizrahi Dental Teaching provides an intimate and supportive environment for the highest quality, hands-on training in all aspects of advanced aesthetic and restorative dentistry. All teaching is done personally by Dr Basil Mizrahi who provides support and mentoring to all delegates throughout the course. Courses are held in Dr Mizrahi's central London practice where a modern dental surgery is integrated with a state-of-the-art hands-on teaching facility. Dr Mizrahi firmly believes that by inviting the delegates into his actual practice and working

environment he can offer much more educationally.

Comprehensive Aesthetic and Restorative – 10-day, hands-on course: This is the cornerstone of the Mizrahi Dental Teaching programme and runs from January to November 2016.

Crowns, Veneers and Temporaries – 4-day, (consecutive) hands-on course: This is an intense course that runs twice a year in July and December.

Other stand-alone courses run throughout the year notably 'Live Patient Treatment' master classes and courses on topical issues such as tooth wear and occlusion. A one day course on worn dentition takes place on Friday 23rd October 2015.

For more information on upcoming courses contact Mizrahi Dental Teaching by email info@mizrahi-dental-teaching.co.uk or visit www.mizrahi-dental-teaching.co.uk or call 0203 394 2984.

IDEAL FOR PAEDIATRIC DENTISTRY

With their inquisitive tongues and short attention spans, treating children can be quite taxing. Therefore, a self-etching and adhesive flowable composite that eliminates both the etching and bonding steps and the associated time expenditure is a real advantage.

DMG's Constic self-etching and adhesive flowable composite solves this problem and saves valuable time too. Post-operative sensitivity is also markedly reduced. Constic is faster, easier, more gentle and reliable.

This innovative 3-in-1 flowable composite combines etching gel, bonding agent and flowable composite in one single product. Consequently, it eliminates both the etching and bonding steps and the associated time expenditure. Possible sources of error are also minimised – advantages not offered by conventional flowable composites requiring the use of a separate adhesive.

As well as treating routine cavities in children, Constic can be used for fissure sealing, MID restorations including small Class I restorations and base linings in adults. Repairing existing restorations and blocking out undercuts can also be quickly carried out with Constic, which is simple to apply and then light-cured.

Available in six shades, Constic is radiopaque with a tooth-like fluorescence.

For further information contact your local dental dealer or DMG Dental Products (UK) Ltd on 01656 789401, fax 01656 360100, email paulw@dmg-dental.co.uk or visit www.dmg-dental.com.

PROVIDING COMPREHENSIVE KNOWLEDGE AND SKILL

PerioAcademy is a certificate course set up and founded by two specialist periodontists, Drs Algrafee and Malaki. The goal was to provide comprehensive knowledge and practical skill in the field of periodontology.

PerioAcademy was designed to deliver and maximise periodontal education for the dental team in a relaxed, modern and open environment. The unique 7-day course is held in a state of the art dental teaching facility in London. Courses are practical and held once a month on a Saturday

After completion of the certificate course, colleagues will:

- Have thorough knowledge of treatment planning basic and complex periodontal cases

- Have understanding of non-surgical and surgical periodontal techniques and be able to apply these techniques in the practice
- Be able to confidently design and execute flap design for surgical techniques for pocket reduction, gingivectomy, regeneration, peri-implantitis and recession
- Have a thorough understanding of crown lengthening, and be able to perform surgical procedures
- Be able to apply templates, fee structure, and ethical and profitable periodontics in the practice
- All templates, sample letters, reading, handouts, suggested non-surgical and surgical equipment will be provided for each course, making application to practice very easy.

Mentoring during and after the course is provided at no extra cost.
