

# NEW PRODUCTS AND FOCUS ON CPD & EDUCATION AND DENTAL IMPLANTS

Please send product news information and images to David Westgarth at the *BDJ*, Nature Publishing Group, The Macmillan Building, 4-6 Crinan Street, London, N1 9XW. Product news is provided as a service to readers using text and images from the manufacturer, supplier or distributor and does not imply endorsement by the *BDJ*. Normal and prudent research should be exercised before purchase or use of any product mentioned.

## ARE ALL BIOMATERIALS REALLY THE SAME?

Geistlich Biomaterials are the experts in regenerative dentistry. Some 1,000 pre-clinical and clinical studies prove the success in practice of Geistlich Bio-Oss and Geistlich Bio-Gide. No other supplier has the same experience when it comes to the number of patients treated and products sold. For almost 30 years, Geistlich Biomaterials has been the undisputed No. 1 in regenerative dentistry.

Geistlich Bio-Oss is very similar to human bone in its structure and chemical make-up. The biofunctional biomaterial aids vascularisation and the formation of new bone. The slow resorption of Geistlich Bio-Oss increases the stability of the augmentation material – the best prerequisite for long-term implant survival rates.

Geistlich Bio-Gide is a porcine collagen membrane without any artificial cross-linking which closely resembles human collagen. The natural bi-layer structure promotes reliable bone regeneration and excellent tissue integration on account of an optimal barrier duration. The soft tissue heals without scarring and largely without complications.

And now, Geistlich Bio-Oss Collagen and the Geistlich Bio-Oss Pen provide superior handling, further enhancing the range of No.1 worldwide biomaterials.
