Full mouth rehabilitation – sequencing and treatment

Despite the drive towards minimally invasive dentistry, there are still many patients who have failing, heavily restored dentitions that are not suitable for this type of adhesive dentistry and require traditional full mouth rehabilitation.

This needs to be carried out at the highest level of precision in a structured, well-planned manner using predictable and accurate techniques in order to ensure long-term success. There needs to be close co-operation and understanding between the clinician and the technician as well as extremely close correlation between technical stages and clinical stages to avoid errors.

On Friday 14 July 2017 Mizrahi Dental Teaching will be presenting an all-day lecture on full mouth rehabilitation which will focus on the sequencing and treatment techniques needed. It will be clinically based and aimed at experienced dentists and technicians.

Aims and objectives:

- How to assess and plan a full mouth rehabilitation
- Understand the steps involved and why each one is needed
- Demonstrate the techniques used including tooth preparation, core restorations, bite registration, temporisation and cementation
- Troubleshooting – it doesn't always go smoothly.

For more information on this and other upcoming courses contact Mizrahi Dental Teaching by email on info@mizrahi-dental-teaching.co.uk, visit www.mizrahi-dental-teaching.co.uk or call 0203 394 2984.

Improve implant care

The popularity of implantology is growing. Data shows that approximately 10,000 mandibular dental implant procedures are carried out in the UK each year, so encouraging patients to maintain good oral hygiene is more important than ever.

Made using CURAL ultra-thin and extra strong surgical wire, the CPS Soft Implant range of interdental brushes from Curaprox has been specifically designed for patients with implants.

Effective, gentle and safe, these quality interdental brushes use long bristles to clean between even the smallest of interdental spaces.

Offering the further benefit of excellent durability – the conical design of the fine wire prevents premature breakage and can last up to five times longer than other interdental brushes on the market – the CPS Soft Implant range is the perfect solution for any patient with one or more implants.

To find out how you could help your patients maintain their implants, contact Curaprox today on 01480 862084, email info@curaprox.co.uk or visit www.curaprox.co.uk.

Dry mouth is on the rise

In a survey of dental professionals, 89% agree that 'dry mouth is on the rise'.

During February Oralieve asked dental professionals about their experience of patients with dry mouth and the results are in. Out of the 621 dental professionals who answered the survey:

- Eighty percent of dental professionals are seeing more than five patients a month with dry mouth and 44% are seeing more than ten a month
- The main causes of dry mouth are: types of medication taken, polypharmacy, Sjögren's syndrome and mouth breathing at night
- Eighty-nine percent agree dry mouth is on the rise.

Recommend the Oralieve Dry Mouth Relief product range for effective relief from dry mouth. Available from www.oralieve.co.uk and Dental Directory.
