The lightest handpiece on the market

GC's NEW Aadvia IOS (Intra Oral Scanner) revolutionises digital impression taking technology because it enables time saving impression taking without retakes. The software visually advises the operator if the image is incomplete, thus preventing the need for retakes. In conjunction with the Aadvia Lab Scan it ensures a perfect fit for all final restorations and provides real-time communication between the surgery and laboratory. There is also a time and cost saving element on impression materials and postage. Finally, the Aadvia IOS ensures greater patient satisfaction via greater treatment comfort and faster results.

Aadvia IOS features user-friendly technology that makes it much less technique sensitive. It also removes impression-related issues relating to tears, bubbles and voids, tray-to-tooth contact, impression material and tray separation, dimensional stability, limited working time, inaccurate pouring during model manufacture, model breakage during shipment, and patient discomfort.

Weighing just 70g the Aadvia IOS is the lightest handpiece on the market. Facilitating powder-free scanning, it offers an easy technique which creates less anxiety for the practice and less chair time.

The Aadvia IOS requires no calibration and its offline file calculation facility enables fast processing times.

Part of the endodontist's toolbox

ROEKO GuttaFlow bioseal from COLTENE is an essential item in any endodontist's toolbox. More than just a simple sealing material, this intelligent obturate offers a number of clinically excellent benefits.

For example, ROEKO GuttaFlow bioseal is a bioactive material that, upon contact with fluids, provides the tooth with natural repair constituents such as calcium and silicates.

After curing, this innovative bioseal then begins to form hydroxyapatite crystals which significantly improve adhesion and encourage regeneration in the bone and dentine tissues. Not only does this improve immediate outcomes, but also helps practitioners provide long-lasting solutions to their patients.

What's more, along with its impressive curative properties, GuttaFlow bioseal features an unprecedentedly fast curing time (12–16 minutes) and a simple workflow – for better results in less time.

With ROEKO GuttaFlow bioseal from COLTENE, practitioners of all endodontic experience can achieve predictable and long-lasting results. To find out more, contact the COLTENE team today. Visit www.coltene.com, email info.uk@coltene.com or call 01444 235486.

An exclusive event with an exciting programme

The brand Italian Dental Style was launched in 2005 and was designed to enable dental professionals to identify others who are passionate about their industry and maintain the highest quality standards in all fields of dentistry. This has created a network of dental laboratories and dentists who strive towards innovation, technical knowledge and quality clinical procedures. Over the past 12 years the brand Italian Dental Style has continued to grow within the European dental industry and is now recognised as a benchmark for high quality treatment across a broad range of prosthodontic techniques.

Italian Dental Style has teamed up with Dentsply Sirona to present the latest in all-ceramic innovations at an exclusive event at LonDEC on 29 July 2017. The exciting programme will appeal to all dental professionals; highlights include Oliviero Turillazzi MDT speaking on 'The aesthetic and functional approach based on the philosophy; Italian Dental Style' and Gianfranco Ferrari MDT on 'The laboratory procedures required for effective treatment planning'. Dr Andrea Savi will present 'Treatment planning to resolution; Multidisciplinary approach towards adhesive prosthodontic restorations'.

To book your seat, search Italian Dental Style at www.eventbrite.co.uk.
