Normal and prudent research should be exercised before purchase or use of any product mentioned.

Smarter endodontic after care

The EndoCare team is dedicated to providing the very best of care to all of its patients – which is exactly why it uses the FollowApp.

An easy-to-use service that better allows the team to monitor patients during their home recovery, the FollowApp ensures that all patients are kept as comfortable and reassured as possible.

Patients are sent an SMS message containing a simple, one-minute survey – the responses to which will help the EndoCare team keep up to date with their recovery. If the patient highlights a problem or concern, the team can then call them back to offer advice or, if necessary, a follow up appointment.

If you are referring patients to EndoCare, you can rest assured that they will receive the same great care from the team. This way, EndoCare can work closely with you and your patient to ensure that every treatment is a success.

To find out more about EndoCare's first-class referral and after care services, contact the friendly team today on 020 7224 0999 or visit www.endocare.co.uk.

An instant burst of minty freshness

Although the human sense of smell is acute, it is difficult for patients to smell their own breath. Therefore, the fear of unpleasant smelling breath remains one of life's most sensitive and significant concerns.

But now your patients can enjoy the reassurance of pleasant breath with CB12.

Unlike some mouth rinses, CB12 mouthwash does not just mask oral malodour temporarily. It has a unique patented formula, specifically developed to target and neutralise odorous volatile sulphur compounds (VSCs) with long lasting effects. CB12 mouthwash is clinically proven to neutralise breath for 12 hours after just one rinse.

Rinsing with CB12 mouthwash also helps to enhance your patients' oral hygiene levels. It contains fluoride to strengthen the teeth and prevent cavities as well as highly effective anti-plaque agents.

As well as this highly effective mouthwash, there is also the handy CB12 Mouth Spray for an instant burst of minty freshness. It's the perfect supplement to CB12 mouthwash and provides patients with additional confidence wherever they go.

For more information about CB12 and how it could benefit your patients, visit www.cb12.co.uk.

Clinically proven bone regeneration solutions

As with all solutions available from Nobel Biocare, the creos family of products is clinically proven to be safe and effective.

The creos xenoprotect resorbable, non-cross-linked collagen membrane has been shown to produce an 81% reduction in defect height six months following the augmentation procedure, compared to a 62% reduction with Bio-Gide (Geistlich). There was also a trend toward lower membrane exposure rates with creos xenoprotect compared to Bio-Gide.

The creos xenogain bone substitute is the newest product in the portfolio, providing a slow resorption rate and a

long-lasting scaffold that maintains space for successful bone regeneration. With a calcium phosphate ratio that reflects the composition of human bone and a low crystalline structure, the biocompatible creos xenogain is also readily accepted by the body as a suitable framework for successful bone formation.

To find out more about the clinically proven creos family of products from Nobel Biocare and to discover how it could help your implant patients, contact the team today on 0208 756 3300, or visit the Nobel Biocare website: www.nobelbiocare.com.
