

Dental products and services

Please send product news information and images to Adrian O'Dowd at adrian.odowd@nature.com. Product news is provided as a service to readers using text and images from the manufacturer, supplier or distributor and does not imply endorsement by the *BDJ*. Normal and prudent research should be exercised before purchase or use of any product mentioned.

At the top of the curve

Dental technology is moving forward at a rapid rate, so keeping abreast of the latest news and innovations is important.

Understanding this, Sparkle Dental Labs is dedicated to using only the most cutting-edge technologies available to ensure the highest quality restorations.

The lab has recently introduced a dedicated CAD/CAM suite that it uses to communicate with its on-site surgery and instantly send scans over to create restorations without delay.

Furthermore, the lab is also committed to exploring 3D printing and its uses in dentistry and has tested a large array of 3D printers and new materials in order to ensure that the field is moving forwards.

By using both 3D printers and a CAD/CAM suite as educational materials, Sparkle Dental Labs says it is passionate about educating staff and students in regards to these new technologies, helping to pave the way to a brighter, faster future of restorations.

For more information, contact Sparkle Dental Labs on 0800 138 6255, or visit www.sparkledentallabs.com.

Stylish Italian design for a family-friendly surgery

Make your treatment room welcoming and inviting for patients of all ages with a dental unit from Castellini, one of the world's leading producers of electro-medical equipment for dental surgeries.

It successfully combines traditional values, cutting-edge technology and first-class quality to create stylish and reliable dental units for treating patients.

The Puma Eli Ambidextrous is an elegant, modern dental unit available in a choice of attractive colours. It looks and feels comfortable, allowing both children and adults to feel safe and relaxed.

Puma Eli Ambidextrous is compact but adaptable. It can be positioned for both left and right working styles whilst optimising the workspace with advanced ergonomics and flexibility.

The state-of-the-art technology and integrated instruments provide fast, intuitive control for quick and efficient appointments and superior manoeuvrability allows practitioners to work easily without leaning over or getting too close to patients.

More information can be found by visiting www.rpadental.net or by calling 08000 933 975.

Titanium strength system

Adin's Trans Mucosal Abutments (TMA) are stronger because they are uniquely milled from one piece of titanium alloy.

The TMAs are used for fixed full-arch prostheses that can be achieved on the day of surgery. The treatment concept uses four or more implants placed at divergent angles and is a cost-efficient, graftless solution. They can also be used incorporated in bar or frame structures where needed.

Adin says the system is used to elevate the seating platform of restorations when the implant level is not suitable or practical due to the depth or angle of the implant. It is designed to allow easier levelling and access for both full and partial prosthetics on divergent implants. Commonly, they are used on tilted implants in the All On Four/Six technique.

The combination of Adin's proven, well accepted and stable implants and strong TMA abutments, offered a cost-effective solution to the retention of full arch prosthesis.

For approximately £660, customers can purchase four implants and four abutments, making this form of treatment affordable for many more patients while still being profitable for the practice.

Adin offers straight TMA abutments in five different heights and angled abutments in 17, 30 & 45 degrees and all are supplied on convenient handles for safe placement onto the implant.
