Simply Saliva

A brand-new, game-changing, show-stopping product has shaken the world of dentistry.

A new mouthwash called Simply Saliva has been launched. The unique formula is the only natural, organic mouthwash on the planet. Simply Saliva has revolutionised dentistry, and caries-free dentistry is on the horizon, according to the manufacturer.

Simply Saliva, unlike any other mouthwash on the market, offers a personalised touch for its consumer with a slogan of 'happy customer, happy life'.

It is available in a range of consistencies – from serous to mucous, depending on the patient's requirements. The transparent and tasteless element of the product means it is ideal for young children, who are commonly irritated by the taste of harsh alcohol in ordinary mouthwashes.

Not only is the new mouthwash alcohol-free, the ingredients are fascinatingly all natural and are manufactured by our own human bodies. This makes Simply Saliva, the only mouthwash in the world suitable for swallowing, hence, a staple product in households, particularly with toddlers. It really is a no-brainer.

The benefits of Simply Saliva are mind-blowing and the exquisite formulation is advantageous, even beyond the oral cavity, say the manufacturers.

One benefit is the glycoproteins within the mouthwash cleverly binding to the enamel surface, which creates a protective pellicle from the nasty acids in our mouth

that eventually cause cavities. Simply Saliva is the future of caries-free dentistry, and there is not a single reason to not purchase this remarkable product. To avoid agonising injections in the mouth, as well as never having to hear the sound of the wicked dental drill again, Simply Saliva is the mouthwash for you.

High Stress Toys presents this year's must have boardgame – Clawback!

All the family can enjoy the pressure of working your way around the board, only to find out what you've lost at the end. You'll need your drill handy because the best way to avoid the Clawback is to

maximise the amount of highly invasive treatments you give.

How to play:

- Each player starts with five cards and can pick up a card for each go

- To go, the player will roll the dice to find out the patient's problem
- Choose which card you would like to use to treat the patient to move further around the board.

Each different card (treatment) will help you move a different amount of spaces around the board:

- Filling – you get to move one space around the board
- Minimum intervention – uh oh! This treatment will take some time. Move back three spaces
- Full clearance! There are no more symptoms to treat. You win.

Pick up Clawback now (while you can still afford it).

Other games from HighStress Toys include Brexi: Try to fit the circles inside the squares in the game which never seems to end.
