World's first autoclavable curing light

GC's D-Light Pro is the world's first autoclavable curing light. Easy to disassemble, once the electronic component and battery have been removed it can be fully autoclaved ensuring optimal hygiene and eliminating the risk of cross contamination.

GC's D-Light Pro is a cordless dual wavelength LED curing light. In its High Power (HP) mode it guarantees very efficient polymerisation of all light-cured materials, regardless of the photo-initiator used. Whilst its Low Power (LP) mode is perfect when clinicians want to limit heat generation in deep cavities.

Its unique Detection (DT) mode uses near-UV light only. This violet mode, with a continuous 60 second irradiation, enables clinicians to spot what is not always visible to the naked eye from infection of dentine to plaque and micro-leakage around old restorations etc. Not designed to polymerise materials it helps visualise bacterial activity and fluorescent materials. Areas displaying bacterial activity exhibiting a red fluorescence whilst healthy tooth structure shows a green fluorescence.

Finally, D-Light Pro offers efficient irradiation regardless of distance. This is important because in some clinical situations it is often not possible to place the curing light in ideal proximity to the material to be polymerised.

A thoroughbred of quality and design

With over 80 years' experience in providing top quality dental equipment, Castellini is proud of its traditional values and Italian pedigree for style.

It also stands for innovation: carefully attending to the many complex requirements that modern dentistry demands to bring technical excellence, reliability and solid design and to all its dental units.

Combining traditional values and innovation together the Skema 8 from Castellini is the 'all inclusive' dental treatment unit. It offers freedom and flexibility with advanced performance from sophisticated electronic controls, cutting-edge technology and integrated systems making it a thoroughbred of quality and design.

Castellini understands how important practitioner comfort is and with careful attention to detail, the Skema 8 has been developed with sublime ergonomics and unique synchronised movements to maintain a relaxed working position.

It really is the 'all inclusive' dental unit, suitable for any clinical situation. To deliver excellent patient care in comfort and style, contact Castellini now.

If you require any further information call 08000 933975 and speak to Castellini UK directly for assistance.

Healthy habits for happiness

For an instant feel good factor and long lasting confidence all day, encourage your patients to make a habit of using CB12 mouthwash as part of their oral health routine.

CB12 has been developed by dentists and has a clinically proven formula to power through unpleasant smelling breath. Unlike some mouthwashes, it does not just mask smells – it contains low concentrations of zinc acetate and chlorhexidine diacetate to target and neutralise the volatile sulphur compounds (VSCs) that actually cause oral malodour.

As well as this, CB12 chemically binds to tissues in the oral cavity to prevent unpleasant smelling breath reoccurring, so your patients can enjoy confident breath for up to 12 hours.

CB12 contains fluoride to strengthen the teeth and prevent cavities, it's easy to use and, by using

it regularly after brushing, patients can make positive steps to improve their oral health.

Put the power in their hands – recommend CB12 mouthwash now.

For more information about CB12 and how it could benefit your patients, visit www.cb12.co.uk.
