

A state-of-the-art facility dedicated to implant training

On 23 November 2017 the Implant Centres of Excellence (ICE) Postgraduate Dental Institute & Hospital in Salford Quays, Greater Manchester, opened its doors to a group of invited guests to showcase its training facilities and highly-skilled team of clinicians and oral surgeons.

ICE is dedicated to dental implants and directors Professor Cemal Ucer, Dr Simon Wright and Dr David Speechley offer a wealth of educational and teaching experience in addition to decades of clinical skills developed jointly in the field.

The overall objective of ICE is to provide postgraduate training and education at differing levels, ranging from accredited programmes and study clubs to dental care professional (DCP) and short courses. All of this is supported by the ICE Mentee Clinic which provides students with the opportunity to treat patients in a structured and supervised environment.

ICE has built the optimal environment for clinicians to study, with a range of modern clinical training suites, a fully-equipped operating theatre, dental surgery and laboratory. Students are provided with the very best high-tech equipment and digital workflow solutions.

As Straumann's National Reference Centre for Digital Dentistry, ICE is very proud that Straumann have ensured that their CARES Digital Solutions portfolio, including chairside intraoral digital scanners, milling technology and the latest software and 3D printers, are available throughout the ICE facility.

On the evening of 23 November ICE was also host to the General Dental Council's (GDC's) Fitness to Practise Study Club, offering an opportunity for guests and local dental professionals to meet Matthew Hill (GDC Director of Strategy) and Jonathan Green (GDC Director of Fitness to Practise) and take part in a debate moderated by Professor Eddie Scher around the morale of the dental profession, the apparent rise in litigation and disciplinary proceedings, and the negative effect such matters has on day-to-day patient care.

To find out more about the educational opportunities available with ICE, contact Education Director Gillian Crofts on gillian.crofts@icedental.institute.

Better, easier, safer disinfectant

LabCert is increasingly being seen as the number one dental prosthesis disinfectant choice by laboratories. Recent independent analysis of swabs taken from 170 prostheses at PDS, one of the UK's foremost dental laboratories, showed LabCert achieving a 5-log reduction in a 30-second soak, without any abrasive cleaning action needed.

Given that it is not possible for a dental laboratory to confirm whether effective decontamination has been carried out by their customers, an 'on-receipt' disinfection process needs to be established in order to protect technicians.

LabCert is a powerful, effective and safe disinfectant that can be used on all materials and appliances that are transferred between dental practices and dental laboratories, thus helping to eliminate cross infection risks such as Hepatitis B for your staff.

LabCert is available in a 1-litre spray and 5-litre pour bottles from The Dental Directory or www.cleancert.co.uk.

Email sales@cleancert.co.uk or call 08443 511115.

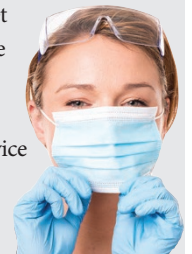

Fighting the corner for dental hygienists and dental therapists

The British Society of Dental Hygiene and Therapy (BSDHT) is run by dental hygienists and therapists and works hard to identify the challenges dental hygienists and therapists face in practice every day and then fights their corner to give them the support needed to improve the care offered to patients.

Its members include more than 3,500 professionals and 350 students, who all share the same passion for excellence and the same desire to be recognised for their amazing work.

Membership provides an opportunity to really get involved and help shape the future of dental hygiene and therapy. It also includes access to an extensive network of like-minded professionals, as well as added benefits like the latest news, research and advice on an array of clinical and non-clinical topics.

Don't be left in the dark

Good dentistry is predicated on high quality evidence – practitioners must diagnose carefully based upon what they can see in the patient's mouth.

The A-dec 500 LED light will ensure you are never left in the dark. With three intensity settings, up to 30,000 lux and a consistent neutral white brightness, the LED light provides dental practitioners with optimum levels of light at all times.

By producing a colour rendering index (CRI) of 94 at 5,000 K, this exceptionally effective light mimics natural light – which means it's easy on the eyes as well!

The A-dec 500 LED light also expends far less energy than a traditional halogen model and, since it does not require bulbs, very little maintenance is required over its impressive 20-year life expectancy.
