Corrigendum: Decoupling the role of stiffness from other hydroxyapatite signalling cues in periosteal derived stem cell differentiation

Giorgio Mattei, Concetta Ferretti, Annalisa Tirella, Arti Ahluwalia & Monica Mattioli-Belmonte

Scientific Reports 5:10778; doi: 10.1038/srep10778; published online 02 June 2015; updated on 20 October 2015

In this Article, the legend of Fig. 6 contains typographical errors.

“Changes in *bmp2*, *runx2* and osteocalcin (*bglap*) mRNA expression in PDPCs seeded on (a) Gel and (b) HA/Gel scaffolds. Data are expressed as fold-regulation which represents fold-change results in a biologically expressive manner. Fold-regulation is equal to the fold-change ($2^{-\Delta\Delta Ct}$) for fold-change values greater than one, which indicate an up-regulation. Fold-change values less than one indicate a down-regulation: in this case the fold-regulation is the negative inverse of the fold-change ($-1/2^{-\Delta\Delta Ct}$). $a = p < 0.05$ vs CTRL; $b = p < 0.05$ vs 25/75 scaffolds; $c = p < 0.05$ vs 60/40 scaffolds.”

should read:

“Changes in *bmp2*, *runx2* and osteocalcin (*bglap*) mRNA expression in PDPCs seeded on (a) HA/Gel and (b) Gel scaffolds. Data are expressed as fold-regulation which represents fold-change results in a biologically expressive manner. Fold-regulation is equal to the fold-change ($2^{-\Delta\Delta Ct}$) for fold-change values greater than one, which indicate an up-regulation. Fold-change values less than one indicate a down-regulation: in this case the fold-regulation is the negative inverse of the fold-change ($-1/2^{-\Delta\Delta Ct}$). $* = p < 0.05$ vs CTRL; $\# = p < 0.05$ vs 25/75 scaffolds; $\$ = p < 0.05$ vs 60/40 scaffolds.”
