Corrigendum: Hydrogen sulfide-induced itch requires activation of $Ca_V3.2$ T-type calcium channel in mice

Xue-Long Wang, Bin Tian, Ya Huang, Xiao-Yan Peng, Li-Hua Chen, Jun-Cheng Li & Tong Liu

Scientific Reports **5**:16768; doi: 10.1038/srep16768; published online 25 November 2015; updated on 20 October 2017

This Article contains errors in the legend of Figure 5.

"(**A**) Systemic zinc chloride ($ZnCl_2$; i.p. 1 mg/kg) significantly inhibited NaHS-induced scratching. (**B**) Local application of $ZnCl_2$ (i.d. 5 nmol) significantly inhibited NaHS-induced scratching in both RTX- and vehicle-treated mice. (**C**) $ZnCl_2$ (i.d. 5 nmol) significantly inhibited NaHS-induced both forelimb wiping and hindpaw scratching in cheek model. (**D**) $ZnCl_2$(i.pl. 5 nmol) significantly inhibited NaHS-induced flinching. (**E**) Systemic ascorbic acid (Asc; i.p. 1 mg/kg) significantly inhibited NaHS-induced scratching. (**F**) Asc (i.d. 1 nmol) significantly inhibited NaHS-induced scratching in both RTX- and vehicle-treated mice. (**G**) Asc (i.d. 1 nmol) significantly inhibited NaHS-induced both forelimb wiping and hindpaw scratching in cheek model. (**H**) Asc (i.pl. 1 nmol) significantly inhibited NaHS-induced flinching. (**I**) Local application of mibefradil (Mib) (i.d. 5–25 nmol) dose-dependently inhibited NaHS-induced scratching in mice. (**J**) Mib (i.d. 10 nmol) significantly inhibited NaHS-induced scratching in RTX-treated mice. (**K**) Mib (i.d. 10 nmol) significantly inhibited NaHS-induced both forelimb wiping and hindpaw scratching in cheek model. (**L**) Mib (i.d. 10 nmol) significantly inhibited NaHS-induced flinching. All data are expressed by means ± SEM. $n = 6$–8 mice per group. $^*P < 0.05$; $^{**}P < 0.01$, $^{***}P < 0.001$ vs. vehicle control, Student's *t* test".
