

Intelligent autoclaving

Eschmann's Little Sister and SES autoclave ranges combine function with design and the latest technology. The SES autoclave offers true self checking cycle verification, incorporating dual systems for totally independent control.

Monitoring of the sterilising cycle allows the autoclave to continually check the parameters of each cycle so that any deviations from the pre-set parameters for successful sterilisation of all loads are immediately detected, so that the cycle is not interrupted.

The range of 11 and 22 litre SES autoclaves also have advanced water systems, direct data download and the new Eschmann instrument management system. For further details telephone 01903 753322 or visit www.newlittlesister.co.uk.

Simple amalgam disposal

As an accredited waste management company, Metasys operates its own recycling plant that processes amalgam waste. Waste amalgam containers for Metasys amalgam separators as well as other brands such as Durr, Cattani and Sirona are delivered directly to your door with a complete service package, making amalgam disposal a simple operation. You return your full waste amalgam container by post once you have filled it.

With each new collection container you will receive legitimate and certified packaging that is used to send back the container once you have filled it. You will also get a bag of disinfectant and a pre-printed address sticker.

Metasys will register your disposal of waste amalgam with the official departments and a confirmation certificate will be posted to you. This flexible service assures you value for money without any long term contracts or hidden costs. For more information contact 0845 838 1636 or visit www.metasys.com.

Triple headed brush

An unusual new toothbrush has just been launched on to the market... Dr Barman's Superbrush is a triple headed brush that cleans three surfaces of the teeth and gum margins simultaneously.

Dr Rolf Barman's research found that 80% of people brush their teeth ineffectively for less than one minute. Professional colleagues reported decades of patients failing to adopt a regular and effective two minute brushing routine twice a day.

Dr Barman's Superbrush is designed to clean more effectively in one minute than conventional toothbrush designs. Its bristles are longer and softer on the outside where they are angled precisely to make contact along inner and outer gum margins. Firmer bristles at the centre of the brush clean the enamel and the fluoride in toothpaste will spread evenly to all surfaces.

It is available in the UK in infant, junior and adult sizes distributed by Dent-O-Care Ltd. Telephone free on 0800 980 1517 or email kproven@dentocare.co.uk for order enquiries and information.

Painless polishing

Shofu manufacture a complete range of abrasives for finishing and polishing including the Super-Snap range.

The unmounted Super-Snap disks are designed for quick and easy polishing of all composite restorations.

The elastic shank mount means easy placing of the disk onto the mandrel and as they are manufactured without a central metal centre, gouging and discolouration of the composite is completely eliminated.

These ultra thin disks are very flexible, bending under pressure without breaking and at the same time allowing easy access to interproximal areas. Competitively priced, the Super-Snap Technique Kit contains the complete range of disks, colour co-ordinated in four different grits together with a range of Super-Snap Polystrips.

The Polystrips are also colour coded with matching grit size for easy identification and offer the same outstanding results as Super-Snap disks for interproximal areas.

Call Shofu on 01892 870800 for further information.
