TITLE: The dental nurses' guide to infection control and decontamination
AUTHOR: K. Porter
PUBLISHER: Quay Books
PRICE: £19.99
ISBN: 1856423603

Handy, affordable, complete.

Finally, a dental nurse textbook that focuses on the important topic of cross infection control rather than simply skimming the surface. Until the new version of the BDA advice sheet A12 Infection Control in Dentistry (BDA, 2003) is published this summer, this book expands on every area of the A12's minimum requirements. The handy sized book is aimed squarely at dental nurses, whichever setting they work in, at an affordable cost.

‘Finally, a dental nurse textbook that focuses on the important topic of cross infection control rather than simply skimming the surface.’

The informative 130 pages are broken up into five easy to understand chapters. The book covers everything from the causes and types of infection to removal of clinical waste and equipment maintenance. The glossary at the start is a useful reference with such items as ‘Bowie-dick test’ and ‘Seroconversion’. Detailed checklists at the end of each chapter summarise the main points and provide external references should the reader need further information. This would also be useful for those currently working towards a qualification. Useful step by step illustrations and photos are
